EDUCATION

College of Computing Technology Dublin - Bachelor of Science in Computing

2021 – 2025

Overall Result: 2:1

Technological University of Dublin (TUD) - Master of Science in Computing (Data Science)

2025 – 2026

Overall Result: On going

TECHNICAL SKILLS

- **Languages:** Java, Python, JavaScript, Dart, R,
- **Frameworks & Libraries:** Spring Boot, Flutter, TensorFlow, Keras, React.js, Flask, Pandas, Fast API
- **Databases:** MongoDB, MySQL, PostgreSQL
- **Developer Tools:** Bash, AWS, Git, Docker, Linux,

PROJECTS

[Deep Learning Model for Fake Image Detection](#) | *Python, TensorFlow, Keras, Streamlit*

(Final Year Project — 3rd Place, [HECA Student Research Awards 2025](#))

- Developed a deep learning model using Python, TensorFlow, and Keras to detect manipulated images and combat the spread of disinformation.
- Evaluated and compared various CNN architectures, including ResNet50 and EfficientNetB0, to optimize for the highest performance.
- Achieved a final model accuracy of 86.5% and deployed it as an interactive web application using Streamlit.

A Centralized 2FA Microservice | *Java, Spring Boot, Spring Security, Docker*

- Architected a secure, stateless 2FA microservice using Java & Spring Boot to provide centralized authentication for multiple applications.
- Implemented the Time-based One-Time Password (TOTP) algorithm (RFC 6238), including robust handling for clock skew to ensure high validation accuracy.
- Ensured end to end security by encrypting user secrets at rest and protecting API endpoints with Spring Security.
- Containerized the service with Docker for scalable and portable deployment in any cloud environment.

Real-Time Stock Aggregator | *Python, Docker, AWS, CI/CD*

- Engineered Python microservices to fetch and analyse real-time livestock market data from multiple sources.
- Deployed services as Docker containers on AWS ECS, configured with auto-scaling to handle variable loads efficiently.
- Leveraged GitHub Actions for a full CI/CD pipeline, automatically building and pushing images to Amazon ECR.
- Utilized Amazon S3 for scalable data storage and CloudWatch for comprehensive performance and log monitoring.

Cloud-Based URL Shortener | *Python, Flask, Docker, AWS (ECS, ECR)*

- Built a highly available Python microservice with Flask to generate short URLs and handle high-volume redirects.
- Containerized the application using Docker and deployed it on AWS ECS, enabling horizontal auto-scaling based on traffic metrics from CloudWatch.
- Implemented a complete CI/CD pipeline with GitHub Actions to automate building, testing, and pushing container images to Amazon ECR.

AWS cloud practitioner: [Certification Badge](#)

WORK EXPERIENCE

Chef de Partie, The Merrion Inn, Dublin

Nov 2022 – Present

Gastropub awarded Best Food Pub at the Irish Pub Awards 2023

- Collaborated closely with a team of 5 chefs to efficiently divide kitchen tasks and ensure smooth food prep before and during busy service hours
- Adapted quickly under pressure, handling last-minute order changes and special dietary requests, including allergies and celiac needs

Kitchen Porter, The Merrion Inn, Dublin

Sep 2021 – Nov 2022

- Handled kitchen deliveries, checked inventory and maintained high standards of cleanliness by washing and organising cutlery, dishes, and kitchen wear

Carer Assistant, Dublin

Dec 2020 – May 2022

Private Home Care Assistance

- Provided exclusive care by assisting one single client with daily living activities, supporting emotional well-being, monitoring health conditions and reporting back to medical staff and family members
